Presentation Structure

- What is the UK Data Service?
- Why is it important to manage your research data?
- DMPs
- Protecting participants
 - Consent
 - Anonymisation
 - Access controls
- Documentation
- Organising and storing data
- Hands on exercises
- Your questions

iversity of Essex

What is the UK Data Service?

- Funded by the ESRC
- Single point of access to a wide range of secondary social science data
- We provide support and training for data creators with accessing, managing, sharing and using data
- Delivered by staff based at universities across the UK (Essex, Manchester, Leeds, Southampton, Edinburgh & UCL)
- UK Data Archive manages the UK Data Service and curates the data

UK Data Service

Site Search FAQ Help Contact

Background

- Data sharing is fast becoming a new paradigm in research across all disciplines, providing benefits to individual researchers, institutions, funders and more
- Good research data management habits are essential to creating data that are suitable for sharing and reuse
- Many funders and academic publishers now specify requirements for data handling, including the formulation of a data management plan

Why is it important to manage research data well?

- Data creation in research is often expensive
- Data is the cornerstone of research
- Good quality data leads to good quality research
- Data underpins published findings

iversity of Essex

- Enables compliance with ethical codes, data protection laws, journal requirements and funder policies
- To protect data from loss, destruction and potential exposure

Practical steps researchers can take

- Write a data management or sharing plan
- Make sure data are shareable and can be understood:
 - Obtain consent to share
 - Do not disclose identities without consent
 - Use open and standard formats
 - Provide context and documentation
 - Protect your data at all stages

ESRC data management plan

Assessment of existing data

Information on new data

Quality assurance of data

Backup and security of data

Difficulties in data sharing and measures to overcome these

Consent, anonymisation, re-use strategies

Copyright / Intellectual Property Ownership

Responsibilities

Management and curation

ESRC DMP guidance

Multiple tools for protecting participants

- 1. Seek informed consent, also for data sharing and longterm preservation and curation
- 2. Protect identities e.g. anonymisation, and (or) not collecting personal data for admin

versity of Essex

3. Regulate access where needed (all or part of data) e.g. by group, use or time period

Informed consent (broadly)

- Consent needs to be freely given, informed, unambiguous, specific and by a clear affirmative action that signifies agreement to the processing of personal data.
- The best way to achieve informed consent for data sharing is to identify and explain the possible future uses of their data and offer the participant the option to consent on a granular level.
- For example, in a qualitative study, this may involve allowing the participant to consent to data sharing of the anonymised transcripts, the non-anonymised audio recordings and the photographs.
- The GDPR requires that researchers document consent. Therefore, it will be essential to keep documented and accurate records of the consent obtained from participants.

In practice: wording in consent forms / information sheets

We expect to use your contributed information in various outputs, including a report and content for a website. Extracts of interviews and some photographs may both be used. We will get your permission before using a quote from you or a photograph of you. After the project has ended, we intend to archive the interviews at Then the interview data can be disseminated for reuse by other researchers, for research and learning purposes.

The interviews will be archived at and disseminated so other researchers can reuse this information for research and learning purposes:

- I agree for the audio recording of my interview to be archived and disseminated for reuse
- I agree for the transcript of my interview to be archived and disseminated for reuse
- I agree for any photographs of me taken during interview to be archived and disseminated for reuse

Anonymising quantitative data - tips

- remove direct identifiers
 e.g. names, address, institution and photos
- reduce the precision / detail of a variable through aggregation
 e.g. birth year instead of date of birth; occupational categories rather than job; and, area rather than village
- generalise meaning of detailed text variable
 e.g. occupational expertise
- restrict upper lower ranges of a variable to hide outliers
 e.g. income and age
- combining variables

niversity of Essex

e.g. creating non-disclosive rural / urban variable from place variables

Anonymising qualitative data

- plan or apply editing at time of transcription except: longitudinal studies - anonymise when data collection complete (linkages)
- avoid blanking out; use pseudonyms or replacements
- avoid over-anonymising removing / aggregating information in text can distort data or make it misleading
- consistency within research team and throughout project
- Identify replacements, e.g. with [brackets]

niversity of Essex

 keep an anonymisation log of all replacements, aggregations or removals made and keep it separate from anonymised data files

Audio-visual data

Digital manipulation of audio and image files can remove personal identifiers

e.g. voice alteration and image blurring (e.g. of faces)

Labour intensive, expensive, may damage research potential of data

Better alternatives:

- obtain consent to use and share data unaltered for research purposes
- avoid mentioning disclosing information during audio recordings

UK Data Service

University of Essex

In practice: example anonymisation

Ex 1. Health and Social Consequences of the Foot and Mouth Disease Epidemic in North Cumbria, 2001-2003 (study 5407 in UK Data Archive collection) by M. Mort, Lancaster University, Institute for Health Research.

Date of Interview: 21/02/02

Interview with Lucas Roberts, DEFRA field officer Date of birth: 2 May 1965 Gender: Male Occupation: Frontline worker Location: Plumpton, North Cumbria

[Lucas] was living at home with his parents, "but I'm hoping to move out soon" so we met at his parents' small neat house. We sat in a very comfortable sitting room with an open fire and [Lucas] made me coffee and offered shortbread. Although at first [Lucas] seemed a little nervous, quick to speech and very watchful he seemed to relax as we spoke and to forget abut the tape.

I will just start by asking you to tell me a little bit about yourself and your background.

Well it is an agricultural background. I grew up on the farm where my brother is now. After I left school I did work on the farm but went to college and did exams, did land use recreation, sort of countryside/ environmental management course. So I obviously left agriculture, did the course and came back [to the farm] at weekends. Comment [v1]: Replace: Ken

Managing access to data

University of Essex

In practice: data with access conditions

Health and Social Consequences of the Foot and Mouth Disease Epidemic in North Cumbria, 2001-2003 (study 5407 in UK Data Archive collection) by M. Mort, Lancaster University, Institute for Health Research.

- Interviews (audio and transcript) and written diaries with 54 people
- 40 interview and diary transcripts are archived and available for reuse by registered users (Safeguarded)
- 3 interviews and 5 diaries were embargoed until 2015 (Safeguarded – Embargoed)
- Audio files archived and only available by permission from researchers (Safeguarded – Special Agreement)

discover.ukdataservice.ac.uk/catalogue/?sn=5407 doc.ukdataservice.ac.uk/doc/5407/mrdoc/pdf/q5407userguide.pdf

niversity of Essex

Documenting your data

- Enables you to understand data when you return to it!
- Sufficient information for future researchers to understand and use the data
- If using your data for the first time, what would a new user need to know to make sense of it?
- The UK Data Archive uses data documentation to:
 - supplement a data collection with documents such as a user guide(s) and data listing
 - ensure accurate processing and archiving

versity of Essex

• create a catalogue record for a published data collection

Include as documentation

- Data collection methodology and processes: sampling, sampling size, fieldwork protocol and interviewer instructions
- Information sheet / consent form
- Questionnaire, showcards and question lists
- Transcripts: header with context information: date and place interview, interviewee name, etc.
- Data list: overview of key information about each interview, as 'at-a-glance' summary of the data collection
- Links to reports and publications

iversity of Essex

Data-level documentation: variable names

- All structured, tabular data should have cases / records and variables adequately documented with names, labels and descriptions
- Variable names might include:

niversity of Essex

- question number system related to questions in a survey / questionnaire e.g. Q1a, Q1b, Q2, Q3a
- numerical order system e.g. V1, V2, V3
- meaningful abbreviations or combinations of abbreviations referring to meaning of the variable

e.g. 'oz%=percentage ozone', 'GOR=Government Office Region', 'moocc=mother occupation', 'faocc=father occupation'

 for interoperability across platforms - variable names should be max 8 characters and without spaces

Data-level documentation: variable labels

- Similar principles for variable labels:
 - be brief, maximum 80 characters
 - include unit of measurement where applicable
 - reference the question number of a survey or questionnaire
 - e.g. variable 'q11hexw' with label 'Q11: hours spent taking physical exercise in a typical week' the label gives the unit of measurement and a reference to the question number (Q11b)
- Codes of, and reasons for, missing data

niversity of Essex

avoid blanks, system-missing or '0' values

e.g. '99=not recorded', '98=not provided (no answer)', '97=not applicable', '96=not known', '95=error'

• Coding or classification schemes used, with a bibliographic ref

e.g. Standard Occupational Classification 2000; ISO 3166 alpha-2 country codes

Embedded data-level metadata in an SPSS file

Y=Interviewee

I=Interviewer

- Y: I came here in late 1968.
- I: You came here in late 1968? Many years already.
- Y: 31 years already. 31 years already.
- I: (laugh) It is really a long time. Why did you choose to come to England at that time?
- Y: I met my husband and after we got married in Hong Kong, I applied to come to England.
- I: You met your husband in Hong Kong?
- Y: Yes.
- I: He was working here [in England] already?

UK Data Service

University of Essex

Organising data

- Plan in advance how best to organise data
- Use a logical structure and ensure collaborators understand

Examples

- hierarchical structure of files, grouped in folders, e.g. audio, transcripts and annotated transcripts
- survey data: spreadsheet, SPSS, relational database
- interview transcripts: individual well-named files

sed

BRUSFROG_trans I cription

UK Data Service

University of Essex

Naming files

20130311_interview2_audio.wav

• 20130311_interview2_trans.rtf

20130311_interview2_image.jpg

- Naming of files:
 - Version
 - Dates YYYY-MM-DD (e.g. 2017-11-28)
 - Creator

niversity of Essex

- Description of content
- Spacing, special characters and dots (e.g. Interview Transcript 01)
- Interview20%Transcript20%01
- Underscores (e.g. Interview_Transcript_01)
- Avoid very long names
- Bulk file renaming

Versioning files

- Version control of files:
 - How many versions to keep? How long for?
 - It can be difficult to identify the correct version of a file if no standard naming practice is implemented
 - Major revisions vs minor revisions
 - 02-00
 - 02-01

Iniversity of Essex

UK•DATA ARCHIVE

Data security

Protect data from unauthorised:

- access
- use
- change
- disclosure
- destruction

Who knows who is watching, listening or attempting to access your data...

University of Essex

Encryption software

niversity of Essex

Encryption software can be easy to use and enables users to:

- encrypt hard drives, partitions, files and folders
- encrypt portable storage devices such as USB flash drives

Digital back-up strategy

Consider

niversitv of Essex

- What's backed-up? all, some or just the bits you change?
- Where? original copy, external local and remote copies
- What media? DVD, external hard drive, USB, Cloud?
- **How often?** hourly, daily, weekly? Automate the process?
- What method / software? duplicating, syncing or mirroring?
- For how long is it kept? data retention policies that might apply?
- Verify and recover never assume, regularly test and restore

Backing-up need not be expensive

 1Tb external drives are around £50, with back-up software

Also consider non-digital storage too!

"We back up our data on sticky notes because sticky notes never crash."

Verification and integrity checks

- Ensure that your backup method is working as intended
- Automated services check
- Be wary when using sync tools in particular
 - Mirror in the wrong direction or using the wrong method, and you could lose new files completely
- You can use checksums to verify the integrity of a backup
- Also useful when transferring files

niversity of Essex

- Checksum somewhat like a files' fingerprint
- ...but changes when the file changes

Checksums

- Each time you run a checksum a number string is created for each file
- Even if one byte of data has been altered or corrupted that string will change
- Therefore, if the checksums before and after backing up a data file match, then you can be sure that the data have not altered during this process
- A free software tool for computing MD5 checksums is <u>MD5summer</u> for windows
- MacOS has the ability built in

niversity of Essex

Collaborative Storage

Sharing data between researchers

- Too often sent as insecure email attachments
- Physical media?
- Virtual Research Environments
 - <u>MS SharePoint</u>
 - <u>Clinked</u>
 - <u>Huddle</u>

Jniversity of Essex

- Basecamp
- Google Docs

Cloud storage services

- Online or 'cloud' services are becoming increasingly popular
- Google Drive, DropBox, Microsoft OneDrive and iCloud

- Benefits:
 - Very convenient
 - Accessible anywhere
 - Good protection if working in the field?

OneDrive

- Background file syncing
- Mirrors files
- Mobile apps available

But,

niversity of Essex

- These are not necessarily secure
- Potential DPA issues
- Not necessarily permanent
- Intellectual property right concerns?
- Limited storage?

By David Fletcher http://www.cloudtweaks.com/2011/05/the-lighterside-of-the-cloud-data-transfer/

Cloud storage services

• Perhaps more secure options?

niversity of Essex

• Cloud data storage should be avoided for high-risk information such as files that contain personal or sensitive information, or information that has a very high intellectual property value.
