The role of the Office for Statistics Regulation (OSR): The who, what, why and how

Regulating labour market statistics: what we cover, recent interventions

Spotlight on LFS and TLFS

The Office for Statistics Regulation

- The regulatory arm of the UK Statistics Authority
- Promote and safeguard the production and publication of official statistics
- Do not produce statistics and are separate from the Office for National Statistics (ONS)

Our role

How statistics are produced

We uphold the trustworthiness, quality and value of statistics and data used as evidence

How statistics are used

We protect the role of statistics in public debate

How statistics are valued

We develop a better understanding of the public good of statistics

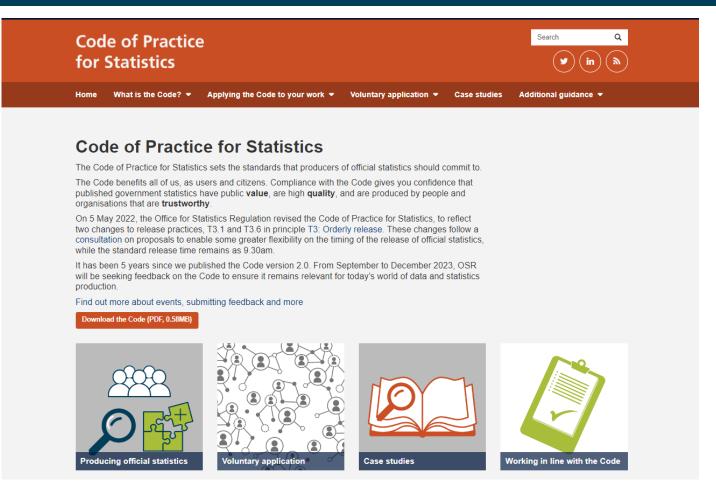

In a world of abundant data, we want people to have confidence in statistics produced by the public sector

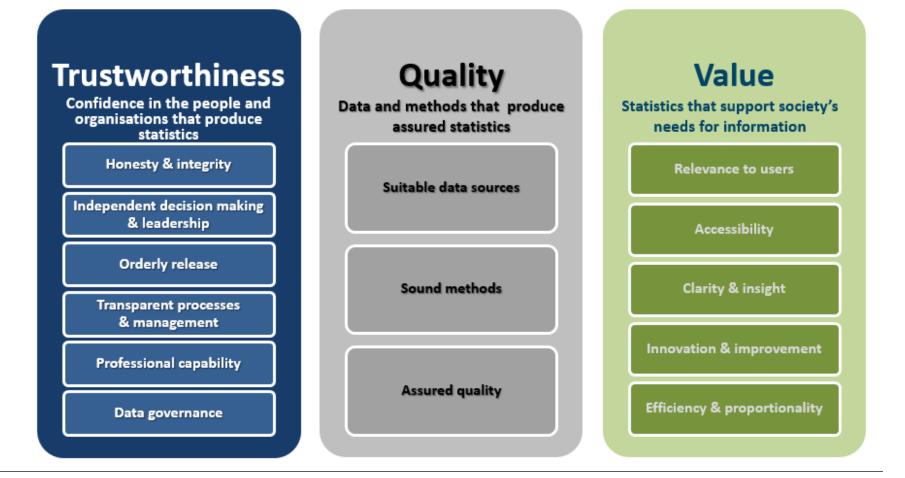

The Code of Practice for Statistics

Three pillars of the Code

TRUSTWORTHINESS

Trustworthiness is about having confidence in the people and organisations that produce statistics and data.

It comes from the organisation that produces statistics and data being well led, well managed and open, and the people who work there being impartial and skilled in what they do.

QUALITY

Quality means that the data and methods used produce assured statistics.

It requires skilled professional judgement about collecting, preparing, analysing and publishing statistics and data in ways that meet the needs of people who want to use the statistics.

VALUE

Value ensures that the statistics support society's needs for information.

It means that the data and statistics are useful, accessible, and produced efficiently, and that the producers are focused on their users so their needs can be anticipated.

How we do it

Regulatory work	Voluntary application of the Code
Research	Data and methods
Policy and standards	Insight

The role of the Office for Statistics Regulation (OSR): The who, what, why and how

Dear Steve	(by email) 14 Feb	ruary 202
	14100	uur y 201
Benefit Sanctions statistics We recently completed our compliance check of your <u>Benefit Sanctions statistics</u> against the <u>Code of Practice for Statistics</u> . Even though these statistics are still in development, they are important official statistics valued by users across government and those with an interest in the Benefits system. We have made several recommendations to support the continued development of these statistics. We considered the Trustworthiness, Quality and Value of these statistics in relation to the Code and have appreciated the positive and constructive way that the team has engaged with us during our review. Our review found many examples of good practice. We would particularly like to recognise the complexities around the development of these statistics are suitably robust. The <u>background information and quidance</u> for the statistics are suitably robust. The <u>background information and quidance</u> for the statistics is comprehensive and provides transparency around the issues with the data and methodol and thave have appreciate domparisons across benefits due to the different data sources used and methodological approaches. Making the data available for wider re-use through Stat.Xolore enables users to carry out their own further analysis and enhances the usefulness of the data. From our conversations with your team, it is clear that a great deal of work is going on to	Dear Steve Assessment of Personal Independence Payment statistics Thank you for inviting us to assess DWP's Personal Independence Payment stat against the Code of Practice for Statistics. We have today published our Assess Report covering these statistics. I am grateful for the positive contribution and en from your team throughout the assessment process. We have identified one requirement to improve the overall value of the statistics i on user engagement to understand a wider range of user views and to drive the i development of the statistics. We judge that the Personal Independence Paymer can be designated as accredited official statistics (called National Statistics in the and Registration Service Act 2007) once we have confirmed that the requirement the report has been met. Addressing the requirement will demonstrate that your s comply with the Code of Practice for Statistics. I am copying this letter to Alexander Rass, Head of Client Statistics at DWP, and Arrowsmith, Juwaria Rahman and Rosie Benfield, the statisticat team at DWP. Yours sincerely	nent gageme focussin future it statisti Statisti set out statistics
re-instate the currently suspended measures and develop the published series further to add more value and meet user needs. This is while dealing with the limitations associated with the data being collected for operational reasons and not specifically for statistical production – for example, the data being held across several different systems and difficulties with accessing the data in a useable format. It was good to hear that regular conversations are happening between the statistics team and policy colleagues within DWP in particular to understand the context behind the year-on-year increases in reasons for sanctions decisions – an area flagged by users who would like to understand more around these reasons. The statistics team also told us that there has been a positive	Rob Kent-Smith Deputy Director for Regulation
